SUMMARY

Software Engineering student with practical experience in front-end development, software project lifecycle, database systems, and problem-solving. Skilled in Python (Pandas, NumPy) C++, OOP, DSA, SQL, and web technologies, with a proven track record of solving 100+ LeetCode problems to strengthen algorithmic thinking and coding proficiency. Adept at translating real-world problems into clean, scalable, and maintainable software solutions.

Currently seeking an entry-level Software Engineering or Software Developer role to contribute technical expertise, grow in a high-impact engineering environment, and build innovative solutions.

EXPERIENCE

Front End Developer

Arch Technologies

April 2026 - May 2026, Remote

- Developed front-end features for internal web applications using HTML5, CSS3, and JavaScript, improving user task completion speed.
- Collaborated with developers to implement Git-based workflows and deploy updates to staging and production environments.
- Created and updated technical documentation and user guides to streamline project handover.

PROJECT

Customer Churn Prediction System

github.com/awaismumtaz1406/customer-churn-prediction-System.git • April 2026 – April 2026

- Built an end-to-end ML pipeline to predict telecom customer churn using a real-world dataset of 7,043 customers, addressing the business problem of revenue loss from customer attrition.
- Performed full data preprocessing including missing value imputation, Label & One-Hot encoding, and StandardScaler normalization to prepare raw data for modeling.
- Trained and compared Logistic Regression and KNN classifiers, evaluating performance using Accuracy, Precision, Recall, F1-Score, and Confusion Matrix.
- Achieved ~80% accuracy with Logistic Regression, delivering actionable insights on high-risk churn indicators such as contract type, tenure, and monthly charges.

Fitness Coaching Application

github.com/awaismumtaz1406/fitness-app.git • January 2026 – January 2026

- Developed a full-stack fitness coaching desktop application using Python, Tkinter, and MySQL.
- Implemented secure authentication with SHA-256 password hashing and parameterized SQL queries.
- Designed a normalized relational database schema for users, fitness data, and workout logs.
- Built GUI features for calorie tracking, diet recommendations, and workout plan management.
- Performed full CRUD operations, multi-user data handling, and persistent session storage.

Weather Dashboard

github.com/awaismumtaz1406/Webprojects.git • November 2025 – November 2025

- Built a **responsive weather dashboard application** using **Weather API integration** to fetch real-time weather data, including temperature and location-based conditions, and implemented **interactive visualizations for historical data analysis** to enhance user experience and engagement.

Currency Converter Dashboard

github.com/awaismumtaz1406/currency-converter.git • October 2025 – October 2025

- Created a currency converter using HTML, CSS, JavaScript, and live Currency API data for dynamic multi-currency conversion with accurate real-time exchange values.

News Dashboard

github.com/awaismumtaz1406/Webprojects.git • August 2025 – August 2025

- Built a responsive news dashboard using HTML, CSS, JavaScript, and News API to display live headlines and category-based news updates.
- Focused on clean UI, API integration, and user-friendly content presentation.

EDUCATION

Bachelor of Science in Software Engineering

University of Management and Technology, Lahore • Pakistan • Expected Graduation: 2028 • 3.5

COURSEWORK

Data Structures and Algorithms

Object-Oriented Programming

Database Management Systems

Software Engineering

Web Development

Artificial Intelligence

SKILLS

C, C++, Java, Python, JavaScript HTML5, CSS3, Bootstrap, REST

APIs,Flask, WordPress, SEO Fundamentals MySQL,SQL

Server, SQL Lite, OOP, DSA, File I/O, Event Handling, Agile, Version

Control

Pandas, NumPy

VS Code, Git, GitHub
